FILL HYPOTHESIS AND METRICS

Unnam Bhargav's Project / Experiments / telegram_onboarding_experiment

Statsig AI

telegram_onboarding_experiment 26/03/2026 - Present

Setup | Diagnostics | Results | Explore | Summary

Hypothesis

Normal

Introducing a structured onboarding flow for our Telegram chatbot will improve user retention. Since retention is a lagging metric (typically requiring 30 to 60 days to observe), our primary evaluation metric will be research-based and should serve as a reliable leading indicator that correlates with long-term retention.
